### The spectrum fuction

Let T be a countable theory over a countable language. Let  $I(T, \alpha)$  denote the number of non-isomorphic models of T with cardinality  $\alpha$ .

What is the behavior of  $I(T, \alpha)$ ?

### Categoricity

- ▶ 1904: Veble introduced categorical theories.
- ▶ 1915 1920: Löwenheim-Skolem Theorem.
- ▶ **1929:** Gödel's completeness theorem.
- ▶ **1954:** Łoś and Vaught introduced  $\kappa$ -categorical theories.
- ▶ **1965:** Morley's categoricity theorem.

### Morley's conjecture

**1960's:** Let T be a first-order countable theory over a countable language. For all  $\aleph_0 < \lambda < \kappa$ ,

 $I(T,\lambda) \leq I(T,\kappa).$ 

1990: Shelah proved Morley's conjecture.

イロト イポト イヨト イヨト

### Shelah's Main Gap Theorem

Theorem (Shelah 1990)

Either, for every uncountable cardinal  $\alpha$ ,  $I(T, \alpha) = 2^{\alpha}$ , or  $\forall \alpha > 0$ ,  $I(T, \aleph_{\alpha}) < \beth_{\omega_1}(|\alpha|)$ .

If T is classifiable and T' is not, then T is less complex than T' and their complexity are not close.

### Descriptive Set Theory

- ▶ **1989:** Friedman and Stanley introduced the Borel reducibility between classes of countable structures.
- 1990's Descriptive set theoretical methods are used to study model theory questions (e.g. Vaught conjecture).
- **1993:** Mekler-Väänänen *κ*-separation theorem.
- ▶ 2007: Laskowski Borel-completeness of ENI-DOP.
- 2014: Friedman-Hyttinen-Kulikov GDST and classification theory.

### The bounded topology

Let  $\kappa$  be an uncountable cardinal that satisfies  $\kappa^{<\kappa} = \kappa$ .

We equip the set  $\kappa^{\kappa}$  with the bounded topology. For every  $\zeta \in \kappa^{<\kappa}$ , the set  $[\zeta] = \{\eta \in \kappa^{\kappa} \mid \zeta \subset \eta\}$ 

### The Generalised Baire spaces

The generalised Baire space is the space  $\kappa^{\kappa}$  endowed with the bounded topology.

The generalised Cantor space is the subspace  $2^{\kappa}$ .

6WGBS 8 of 42

### Coding structures

Fix a relational language  $\mathcal{L} = \{P_n | n < \omega\}.$ 

#### Definition

Let  $\pi$  be a bijection between  $\kappa^{<\omega}$  and  $\kappa$ . For every  $f \in \kappa^{\kappa}$  define the structure  $\mathcal{A}_f$  with domain  $\kappa$  and for every tuple  $(a_1, a_2, \ldots, a_n)$  in  $\kappa^n$ 

$$(a_1, a_2, \ldots, a_n) \in P_m^{\mathcal{A}_f} \Leftrightarrow f(\pi(m, a_1, a_2, \ldots, a_n)) > 0$$

### The isomorphism relation

#### Definition

Miguel I Shelah's

Given T a first-order complete countable theory in a countable vocabulary, we say that  $f, g \in \kappa^{\kappa}$  are  $\cong_T$  equivalent if one of the following holds:

$$A_f \models T, A_g \models T, A_f \cong A_g A_f \nvDash T, A_g \nvDash T$$

	- 200
Moreno (UV)	6WGBS
s Main Gap and the generalized Borel-reducibility	10 of 42

### Reductions

Let  $E_1$  and  $E_2$  be equivalence relations on  $2^{\kappa}$ . We say that  $E_1$  is *continuous reducible* to  $E_2$ , if there is a continuous function  $f: 2^{\kappa} \to 2^{\kappa}$  that satisfies  $(x, y) \in E_1 \Leftrightarrow (f(x), f(y)) \in E_2$ . We write  $E_1 \hookrightarrow_C E_2$ .

We can define a partial order on the set of all first-order complete countable theories

$$T \leq^{\kappa} T'$$
 iff  $\cong_T \hookrightarrow_C \cong_{T'}$

### Non-classifiable theories

A theory T is non-classifiable if it is a countable complete theory that satisfies one of the following:

- T is unstable;
- T is stable unsuperstable;
- ► *T* is superstable with DOP;
- ► T is superstable with OTOP.

Miguel Moreno (UV)	
Shelah's Main Gap and the generalized Borel-reducibility	

### Consistency

Theorem (Hyttinen - Kulikov - M. 2017) Suppose  $\kappa = \lambda^+$ ,  $2^{\lambda} > 2^{\omega}$ , and  $\lambda^{<\lambda} = \lambda$ . There is a  $\kappa$ -closed  $\kappa^+$ -cc forcing which forces: If T is classifiable and T' is non-classifiable, then  $T \leq^{\kappa} T'$  and  $T' \leq^{\kappa} T$ .

References

### Classifiable and shallow

Theorem (Mangraviti - Motto Ros 2020)

Let  $\kappa$  be such that  $\kappa > 2^{\omega}$ . If T is classifiable and shallow with depth  $\alpha$ , then  $\mathsf{rk}_B(\cong_T) \leq 4\alpha$ .

#### Theorem (Mangraviti - Motto Ros 2020)

Let  $\kappa = \aleph_{\gamma}$  be such that  $\kappa^{<\kappa} = \kappa$  and  $\beth_{\omega_1}(|\gamma|) \le \kappa$ . Let T, T' be countable complete first-order theories, and suppose T is classifiable and shallow, while T' is not. Then

$$\cong_T \hookrightarrow_B \cong_{T'}$$

### Unsuperstable theories

Theorem (Hyttinen - Kulikov - M. 2017) Suppose  $\kappa = \lambda^+$ ,  $2^{\lambda} > 2^{\omega}$ , and  $\lambda^{\omega} = \lambda$ . If T is classifiable and T' is stable unsuperstable, then  $T \leq^{\kappa} T'$  and  $T' \leq^{\kappa} T$ .

Theorem (M. 2022) Suppose  $\kappa = \lambda^+ = 2^{\lambda}$  and  $\lambda^{\omega} = \lambda$ . If T is a classifiable theory, and T' is an unsuperstable theory, then  $T \leq^{\kappa} T'$  and  $T' \not\leq^{\kappa} T$ .

# Equivalence modulo $\gamma$ cofinality

#### Definition

We define the equivalence relation  $=_{\gamma}^2 \subseteq 2^{\kappa} \times 2^{\kappa}$ , as follows: let  $S = \{ \alpha < \kappa \mid cf(\alpha) = \gamma \}$ ,

 $\eta =_{\gamma}^{2} \xi \iff \{ \alpha < \kappa \mid \eta(\alpha) \neq \xi(\alpha) \} \cap S \text{ is non-stationary.}$ 

### Classifiable theories

### Theorem (Hyttinen - Kulikov - M. 2017) Assume T is a classifiable theory. If $\diamondsuit_S$ holds, then $\cong_T \hookrightarrow_C =_{\gamma}^2$ .

### Main result

#### Theorem (M. 2023)

Let  $\mathfrak{c} = 2^{\omega}$ . Suppose  $\kappa = \lambda^+ = 2^{\lambda}$  and  $2^{\mathfrak{c}} \leq \lambda = \lambda^{\omega_1}$ . If T is a classifiable theory, and T' is a non-classifiable theory, then there is  $\gamma < \kappa$  such that

$$\cong_T \hookrightarrow_C =^2_{\gamma} \hookrightarrow_C \cong_{T'}$$
 and  $=^2_{\gamma} \not\hookrightarrow_B \cong_T$ .

In particular

$$T \leq^{\kappa} T'$$
 and  $T' \not\leq^{\kappa} T$ .

< ロ > < 回 > < 回 > < 回 > < 回 >

### Blue print of the proof

- Construct an ε-dense, (κ, bs, bs, ε)-nice, (< κ, bs)-stable, and κ-colorable linear order.
- Construct ordered trees from the linear order.
- Construct skeletons from ordered trees, to construct Ehrenfeucht-Mostowski models.

### $\varepsilon$ -dense

#### Definition

Let I be a linear order of size  $\kappa$  and  $\varepsilon$  a regular cardinal smaller than  $\kappa$ . We say that I is  $\varepsilon$ -dense if the following holds.

If  $A, B \subseteq I$  are subsets of size less than  $\varepsilon$  such that for all  $a \in A$ and  $b \in B$ , a < b, then there is  $c \in I$ , such that for all  $a \in A$  and  $b \in B$ , a < c < b.

### $\kappa$ -representation

#### Definition

Let A be an arbitrary set of size  $\kappa$ . The sequence  $\mathbb{A} = \langle A_{\alpha} \mid \alpha < \kappa \rangle$  is a  $\kappa$ -representation of A, if  $\langle A_{\alpha} \mid \alpha < \kappa \rangle$  is an increasing continuous sequence of subsets of A, for all  $\alpha < \kappa$ ,  $|A_{\alpha}| < \kappa$ , and  $\bigcup_{\alpha < \kappa} A_{\alpha} = A$ .

References

#### Definition

Let  $\varepsilon < \kappa$  be a regular cardinal, A be a linear order of size  $\kappa$  and  $\langle A_{\alpha} \mid \alpha < \kappa \rangle$  a  $\kappa$ -representation. Then A is  $(\kappa, bs, bs, \varepsilon)$ -nice if there is a club  $C \subseteq \kappa$ , such that for all limit  $\delta \in C$  with  $cf(\delta) \ge \varepsilon$ , for all  $x \in A$  there is  $\beta < \delta$  such that one of the following holds:

$$\forall \sigma \in A_{\delta}[\sigma \ge x \Rightarrow \exists \sigma' \in A_{\beta} \ (\sigma \ge \sigma' \ge x)] \\ \forall \sigma \in A_{\delta}[\sigma \le x \Rightarrow \exists \sigma' \in A_{\beta} \ (\sigma \le \sigma' \le x)]$$

$$(<\kappa, bs)$$
-stable

#### Definition

A linear order I is  $(< \kappa, bs)$ -stable if for every  $B \subseteq I$  of size smaller than  $\kappa$ ,

$$\kappa > |\{tp_{bs}(a, B, I) \mid a \in I\}|.$$

### $\kappa$ -colorable

#### Definition

Let I be a linear order of size  $\kappa$ . We say that I is  $\kappa$ -colorable if there is a function  $F : I \to \kappa$  such that for all  $B \subseteq I$ ,  $|B| < \kappa$ ,  $b \in I \setminus B$ , and  $p = tp_{bs}(b, B, I)$  such that the following hold: For all  $\alpha \in \kappa$ ,

$$|\{a \in I \mid a \models p \& F(a) = \alpha\}| = \kappa.$$

Shelah's Main Gap and the generalized Borel-reducibility

イロト イポト イヨト イヨト

References

### The order

Let  $\theta < \kappa$  be the smallest cardinal such that there is a  $\varepsilon$ -dense model of *DLO* of size  $\theta$ .

#### Theorem

Suppose  $\kappa$  is inaccessible, or  $\kappa = \lambda^+$ ,  $2^{\theta} \leq \lambda = \lambda^{<\varepsilon}$ . There is a  $\varepsilon$ -dense,  $(\kappa, bs, bs, \varepsilon)$ -nice,  $(< \kappa, bs)$ -stable, and  $\kappa$ -colorable linear order.

### $\kappa^+$ , ( $\gamma$ + 2)-tree\*

Let  $\gamma < \kappa$  be a regular cardinal. A  $\kappa^+$ ,  $(\gamma + 2)$ -tree<sup>\*</sup> t is a tree with the following properties:

t has a unique root.

• Every element of t has less than  $\kappa^+$  immediate successors.

All the branches of t have order type  $\gamma$  or  $\gamma + 1$ .

#### • Every chain of length less than $\gamma$ has a unique limit.

### Ordered trees

#### Definition

Let  $\gamma < \kappa$  be a regular cardinal and I a linear order.  $(A, \prec, <)$  is an ordered tree if the following holds:

- (A,  $\prec$ ) is a  $\kappa^+$ , ( $\gamma$  + 2)-tree<sup>\*</sup>.
- for all  $x \in A$ , (succ(x), <) is isomorphic to *I*.

### Isomorphism of trees

#### Theorem (M. 2023)

Suppose  $\gamma < \kappa$  is such that for all  $\epsilon < \kappa$ ,  $\epsilon^{\gamma} < \kappa$ , and there is a  $\kappa$ -colorable linear order I. For all  $f \in 2^{\kappa}$  there is an ordered tree  $A_f$  such that for all  $f, g \in 2^{\kappa}$ ,

$$f =_{\gamma}^{2} g \Leftrightarrow A_{f} \cong A_{g}.$$

Shelah's Main Gap and the generalized Borel-reducibility

### Skeletons

#### Definition

For every  $f \in 2^{\kappa}$  let us define the order K(f) by:

- I. dom  $K(f) = (dom A_f \times \{0\}) \cup (dom A_f \times \{1\}).$
- II. For all  $\eta \in A_f$ ,  $(\eta, 0) <_{\mathcal{K}(f)} (\eta, 1)$ .
- III. If  $\eta, \xi \in A_f$ , then  $\eta \prec \xi$  if and only if

$$(\eta,0) <_{\mathcal{K}(f)} (\xi,0) <_{\mathcal{K}(f)} (\xi,1) <_{\mathcal{K}(f)} (\eta,1).$$

IV. If  $\eta, \xi \in A_f$ , then  $\eta < \xi$  if and only if  $(\eta, 1) <_{K(f)} (\xi, 0)$ .

### The models

Suppose  $\kappa$  is inaccessible, or  $\kappa = \lambda^+$ ,  $2^{\theta} \leq \lambda = \lambda^{<\varepsilon}$ . Let  $\gamma < \kappa$  be such that for all  $\epsilon < \kappa$ ,  $\epsilon^{\gamma} < \kappa$ .

#### Lemma (M. 2023)

Suppose T is superstable with DOP in a countable relational vocabulary  $\tau$ . Let  $\tau^1$  be a Skolemization of  $\tau$ , and  $T^1$  be a complete theory in  $\tau^1$  extending T and with Skolem-functions in  $\tau$ . Then for every  $f \in 2^{\kappa}$  there is  $\mathcal{M}_1^f \models T^1$  with the following properties.

### The models

#### Lemma (M. 2023)

1. There is a map  $\mathcal{H} : A_f \to (\text{dom } \mathcal{M}_1^f)^n$  for some  $n < \omega$ ,  $\eta \mapsto a_\eta$ , such that  $\mathcal{M}_1^f$  is the Skolem hull of  $\{a_\eta \mid \eta \in A_f\}$ . Let us denote  $\{a_\eta \mid \eta \in A_f\}$  by  $Sk(\mathcal{M}_1^f)$ .

2. 
$$\mathcal{M}^f = \mathcal{M}^f_1 \upharpoonright \tau$$
 is a model of  $T$ .

- 3.  $Sk(\mathcal{M}_1^f)$  is indiscernible in  $\mathcal{M}_1^f$  relative to  $L_{\omega_1\omega_1}$ .
- 4. There is a formula  $\varphi \in L_{\omega_1\omega_1}(\tau)$  such that for all  $\eta, \nu \in A_f$ and  $m < \gamma$ , if  $A_f \models P_m(\eta) \land P_\gamma(\nu)$ , then  $\mathcal{M}^f \models \varphi(a_\nu, a_\eta)$  if and only if  $A_f \models \eta \prec \nu$ .

< ロ > < 同 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 >

### The isomorphism theorem

Theorem (M. 2023)

Suppose T is a non-classifiable first order theory in a countable relational vocabulary  $\tau$ .

1. If T is unstable or superstable with OTOP,  $\omega \leq \gamma < \kappa$  is such that for all  $\alpha < \kappa$ ,  $\alpha^{\gamma} < \kappa$ , then for all  $f, g \in 2^{\kappa}$ 

$$f =_{\gamma}^{2} g \text{ iff } \mathcal{M}^{f} \cong \mathcal{M}^{g}.$$

2. If T is superstable with DOP,  $\kappa$  is inaccessible or  $\kappa = \lambda^+$  and  $2^{\mathfrak{c}} \leq \lambda$ , and  $\omega_1 \leq \gamma < \kappa$  is such that for all  $\alpha < \kappa$ ,  $\alpha^{\gamma} < \kappa$ , then for all  $f, g \in 2^{\kappa}$ ,

$$f =_{\gamma}^{2} g \text{ iff } \mathcal{M}^{f} \cong \mathcal{M}^{g}.$$

### The reductions

### Theorem (M. 2023)

Let  $\kappa$  be inaccessible or  $\kappa = \lambda^+ = 2^{\lambda}$ . Suppose T is a non-classifiable theory.

- 1. If T is stable unsuperstable, then let  $\theta = \gamma = \omega$ .
- 2. If T is unstable, or superstable with OTOP, then let  $\theta = \omega$ and  $\omega \leq \gamma < \kappa$ .
- 3. If T is superstable with DOP, then let  $\theta = 2^{\omega} = \mathfrak{c}$  and  $\omega_1 \leq \gamma < \kappa$ .

If  $\theta$ ,  $\gamma$ , and  $\kappa$  satisfy that  $\forall \alpha < \kappa$ ,  $\alpha^{\gamma} < \kappa$ , and  $(2^{\theta})^+ \leq \kappa$ , then

$$=^2_{\gamma} \hookrightarrow_C \cong_{\mathcal{T}} .$$

### A bigger Gap

#### Theorem (M. 2023)

Suppose  $\kappa$  is inaccessible, or  $\kappa = \lambda^+ = 2^{\lambda}$  and  $2^{\mathfrak{c}} \leq \lambda = \lambda^{\omega_1}$  and  $\lambda^{<\lambda} = \lambda$ . There exists a cofinality-preserving forcing extension in which the following holds:

If  $T_1$  is classifiable and  $T_2$  is not. Then there is a regular cardinal  $\gamma < \kappa$  such that, if  $X, Y \subseteq S_{\gamma}^{\kappa}$  are stationary and disjoint, then  $=_X^2$  and  $=_Y^2$  are strictly in between  $\cong_{T_1}$  and  $\cong_{T_2}$ .

### Main Gap Dichotomy

### Theorem (M. 2023)

Let  $\kappa$  be inaccessible, or  $\kappa = \lambda^+ = 2^{\lambda}$  and  $2^{\mathfrak{c}} \leq \lambda = \lambda^{<\omega_1}$ . There exists a  $< \kappa$ -closed  $\kappa^+$ -cc forcing extension in which for any countable first-order theory in a countable vocabulary (not necessarily complete), T, one of the following holds:

$$\blacktriangleright \cong_{\mathcal{T}} is \Delta_1^1;$$

$$\blacktriangleright \cong_T$$
 is  $\Sigma_1^1$ -complete.

### On Morley's Conjecture

### Lemma (M. 2023)

Let  $\kappa$  be strongly inaccessible, or  $\kappa = \lambda^+ = 2^{\lambda}$  and  $2^{\mathfrak{c}} \leq \lambda = \lambda^{<\omega_1}$ . For all cardinals  $\aleph_0 < \mu < \delta < \kappa$ , if T is a non-classifiable theory then

$$\cong^{\mu}_{\mathcal{T}} \hookrightarrow_{\mathcal{C}} \cong^{\delta}_{\mathcal{T}} \hookrightarrow_{\mathcal{C}} \text{ id } \hookrightarrow_{\mathcal{C}} \cong_{\mathcal{T}}.$$

The reductions also hold for T a classifiable non-shallow theory, when  $\kappa$  is a strongly inaccessible cardinal.
